

Marine **XTERIOR**

TRIPANEL MARINE Xterior and Melamine

Tricel has expanded upon our “better mousetrap” for the yacht building industry, with our Tripanel Marine Xterior. TPM Xterior has a thicker outer skin, and is designed for bulkheads and soles. It accepts fasteners with ease, and is extremely easy to work with.

Created for interiors of cabinetry, shelving, and bulkheads that need a “finished look”, TRIPANEL MARINE MELAMINE. It substitutes costly painting with a fine finished melamine surface. It can be banded with HPL, or melamine edge banding tapes for close-out, with almost any color available.

Saving weight and labor while maintaining quality has always been the credo of Tricel for the yacht building industry. These two products have a proven track record, and we are happy to assist in finding the right material for your application
